DETAILED ACTION

1. The amendment filed 01/27/2010 has been received and considered. Claims 25 and 27-32 are presented for examination.

Allowable Subject Matter

2. Claim 25 and 27-32 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:

While Feld et al. teaches a method and system of object model generation including storing a set of weight values expressing a first object model of a first type as weighted sum of a plurality of predefined object models, each of the first type, wherein the object models of the first type comprise an avatar, applying the set of weight values to a plurality of predefined models of a second type, wherein the object models of the second type comprise clothing models to generate an output object of the second types corresponding to a weighted sum of the predefined models of the second type wherein the output object model of the second type comprise a model of clothing garments in the shape which the garments would assume when applied to the avatars, and displaying to a user an avatar represented by the first object model of the first type simultaneously with an article of clothing represented by said output object model of the second,

none of the prior art of record discloses a method for virtual object generation, including:

(Claim 25) “a)...a, representing a received first object model;

b)... a set of weight values, w, expressing the received first model of a first type as a weighted sum of a plurality of predefined object models, ... wherein the object models ... comprise an avatar, such that

$w = V \cdot \text{sup.} + a$, wherein $V \cdot \text{sup.} +$ is the pseudo-inverse of V , V representing the vertex coordinates of the plurality of predefined object models;

c) applying the set of weight values $w \dots$ to a weighted sum, $C_{\text{NEW}} \dots$ wherein, said applying includes calculating $C_{\text{NEW}} = C W$, wherein c represents the vertex coordinates of the respective meshes of the predefined models of the second type;”,

(Claim 28) “a) ... a, representing a received first object model;

b) ... a set of weight values, w , expressing the received first model of a first type as a weighted sum of a plurality of predefined object models, ... wherein the object models ... comprise an avatar, such that

$w = V \cdot \text{sup.} + a$, wherein $V \cdot \text{sup.} +$ is the pseudo-inverse of V , V representing the vertex coordinates of the plurality of predefined object models;

c) applying the set of weight values $w \dots$ to a weighted sum, $C_{\text{NEW}} \dots$ wherein, said applying includes calculating $C_{\text{NEW}} = C W$, wherein c represents the vertex coordinates of the respective meshes of the predefined models of the second type;”, and

(Claim 31) “a) ... a, representing a received first object model;

b) ... a set of weight values, w , expressing the received first model of a first type as a weighted sum of a plurality of predefined object models, ... wherein the object models ... comprise an avatar, such that

$w = V \cdot \text{sup.} + a$, wherein $V \cdot \text{sup.} +$ is the pseudo-inverse of V , V representing the vertex coordinates of the plurality of predefined object models;

c) applying the set of weight values $w \dots$ to a weighted sum, $C_{\text{NEW}} \dots$ wherein,

said applying includes calculating $C_{NEW} = C \cdot W$, wherein c represents the vertex coordinates of the respective meshes of the predefined models of the second type;”,
in combination with the remaining elements and features of the claimed invention.
It is for these reasons that the applicant’s invention defines over the prior art of record.
